

Normal Force Exercises

To simplify the math on this sheet, please use $g=10.0 \text{ m/s}^2$ instead of the usual 9.8 m/s^2 . This is a common and super-convenient approximation!

Find the normal force

For each situation below, find the normal force, F_N , from the table that pushes up on the block.

You **MUST** show your work, starting with $F_{net}=m \cdot a$! (In all of these problems, $a=0 \text{ m/s}^2$.)

<p>1)</p> 	<p>2)</p> 	<p>3)</p> 
<p>4)</p> 	<p>5)</p> 	<p>6)</p> 
<p>7)</p> 	<p>8)</p> 	<p>9)</p> 

Find other stuff, given F_N

In these situations, F_N is given in the form of the scale's reading and you are asked to find either a missing force from a hand or the mass of the block (based on F_g). Don't forget to show your work!
